

## WHAT IS IT?

The Parks for Pollinators BioBlitz is an event where community members create a snapshot of the variety of wildlife that can be found in Milton during September. We'll use an app called iNaturalist to take pictures of plants, insects and animals to see what wildlife is present in the park on this day and provide us with more information about pollinators, which are essential to our ecosystem. This information will help us understand how we can better protect pollinators and other important wildlife in our community.

## HOW TO:

1. Download the **iNaturalist** app or go to [www.inaturalist.org](http://www.inaturalist.org) and create an account.
2. Join the **Parks for Pollinators 2021: Milton, WI** project.
3. During the month of **September**, take photographs of pollinators around Milton and add them to the project.
